

EPA Renovation, Repair, and Painting Initial Training Course

Common renovation activities like sanding, cutting, and demolition can create hazardous lead dust and chips by disturbing lead-based paint, which can be harmful to adults and children. To protect against this risk, in April 2008, EPA issued a rule requiring the use of lead-safe practices and other actions aimed at preventing lead poisoning. Under the rule, beginning in **April 2010**, contractors performing renovation, repair and painting (RRP) projects that disturb lead-based paint in homes, child care facilities, and schools built before 1978 must be **certified** and must follow specific work practices to prevent lead contamination.

The Profession Remodelers Organization, Inc.
has scheduled two classes for this certification

Training provided by: The InService Training Network, Inc.

When: October 27 OR November 4, 2009
